

Flexible where it matters

THE NEW FLEX TAB

Link to Video

- ✓ **Remains flexible under pressure**
No breaking or deformation like with rigid tabs
- ✓ **Adapts to uneven surfaces**
Ensures even contact with the substrate
- ✓ **Simplifies the workflow**
Film sits directly and reliably
- ✓ **Secure adhesion of the protective film**
The adhesive surface remains firmly in place even under load
- ✓ **Reduces rework**
Fewer corrections during installation
- ✓ **Easy to cut**
Can be trimmed precisely without breaking or tearing

ADVANTAGE IN PRACTICE

Reveal profiles are an integral part of modern plaster and ETICS systems. They ensure a clean and straight connection between window and façade and enable a neat finishing detail. At the same time they serve as a holder for protective films that must be securely fixed to the window during processing. With the new VWS Flex Tab, this detail becomes significantly improved.

Instead of rigid plastic tabs, a flexible solution is used. This tab remains movable even under load and adapts to the conditions on the construction site. Movements caused by pressure, uneven surfaces or component tolerances can therefore be absorbed much better than with conventional systems.

SYSTEM VARIANTS WITH FLEX TAB with Flex Tab

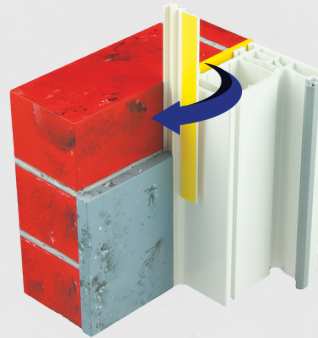

The VWS Flex Tab is available in various reveal profiles and can be used indoors and outdoors depending on requirements. All variants follow the same principle: a clean plaster finish combined with a secure and flexible attachment for the protective film.

Variable solution

Combination reveal profile with Flex Tab

This version offers additional flexibility in applications with different plaster thicknesses. Ideal for construction sites where variable plaster thicknesses must be considered. When cutting the profile, the tab does not break.

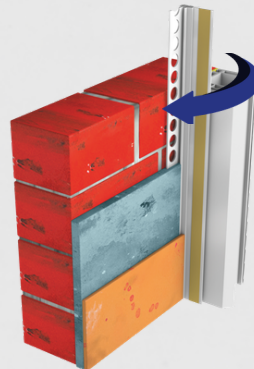

Item no. 646960

- Color: White
- Plaster thickness: 6 + 9 mm
- Length: 2.60 m
- Application: Interior plaster & two-layer exterior plaster

Standard solution

Reveal profile with Flex Tab

The integrated Flex Tab ensures reliable attachment of the protective film and makes installation easier, especially on slightly uneven surfaces.

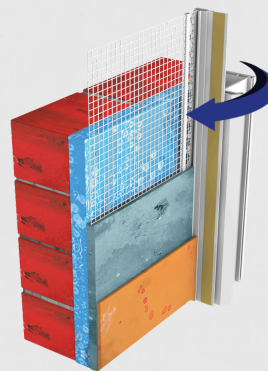

Item no. 644310

- Color: White
- Plaster thickness: 9 mm
- Length: 2.60 m
- Application: Interior plaster & two-layer exterior plaster

With mesh for ETICS

Combination reveal profile with Flex Tab + mesh

With integrated mesh for secure integration into ETICS systems. Especially suitable for applications where additional reinforcement in the joint area is required.

Item no. 646910

- Color: White
- Plaster thickness: 6 + 9 mm
- Length: 2.60 m
- Application: ETICS with mesh integration

High movement absorption

Reveal profile Dynamik with Flex Tab

The Flex Tab enables secure and clean attachment of the protective film directly on the profile. It ensures reliable adhesion and supports stress-free installation. This guarantees efficient installation in ETICS systems.

Item no. 644820

- Color: White
- Application: ETICS
- Plaster thickness up to 14 mm
- Length: 2.60 m and 3.00 m
- With mesh integration
- High movement absorption for stress-free joints
